For Project 2, you will be creating a 3D game in Unity. You are welcome to design any game you would like, provided it fits the given theme. I do expect a full prototype of your game, one that has gone through multiple revisions to improve the game. These revisions must be documented and cannot just be feature additions but should be meaningful modifications to the game based on playtesting feedback. Ideally, it should be a "vertical slice" that you would show at a job interview or to funders. For this project, that means at least one level that teaches the concepts of your game and applies them. While you should have the player use the concepts when taught, you need to make sure you have the player use the concepts you taught in unique ways later in the level. Animations for the characters where appropriate are optional but recommended (creating your own animations are not recommended). Some form of Audio for events is required. Please do be careful about copyrighted material.

I am also looking for a High Concept Document and Game Script (as we discussed in class when covering the third slide deck) with details about your game. You need to include as much detail as possible based on your design and process for the game's development. Some things I will be specifically looking for: What You Are Learning/What is the Game Teaching, Rules, Concept of Your Game, Game Modes, a description on your expected player, and any Background Information (things I would need to play or story information not in the game itself). You will need to have iterations of your game, showing playtesting and modifications based on that playtesting, on GitHub. You should include a description of the changes you made and why in your Game Script.

You must host your code on GitHub and upload your final releases to Box. On Blackboard, I will need you to submit your report and a link to the repo. Please add me as a collaborator to your repo so I can grade your project more easily. My GitHub account is: cwwalterOleMiss

You must have a build of your final game as a release on Box for the following platforms:

- Windows (x86) (ARM optional, not required)
- Mac
- Linux (x86) (ARM optional, not required)

For Graduate Students: You must explicitly define your design schemas and how your final design connects to those schemas, based on the schemas we discussed in "Rules of Play." You must also include a Finite State Machine of your player's actions and any enemy behavior. Your characters must have some animations.

The theme for Project 2 is: **Halloween**

Note this does not mean you must use models or create a horror game. Just that you should have some theming in the game (colors, descriptions, text information, story, etc.) that implies October, Fall, or Halloween concepts.

Grading:

	5	4	3	2	1	0
Game is Playable on My Hardware	Yes, with provided release	Yes, if I compile myself, but no other modifications	Yes, but only with changes I have to make	Yes, but only after I have to reach out	Yes, but only on your hardware	No
Game is 3D and Created in Unity	Yes				3d, not Unity	No
Level(s) Introduce Mechanics and Use Them in Game	Learn in one level, utilize in new ways for all abilities	Learn most abilities and utilize them in new ways	Learn abilities and use them as taught	Some abilities not taught, but those that are taught are utilized in the level	No abilities taught, but they exist	No learning
Audio is Used Appropriately	Yes	Yes, but not everywhere it is needed	Yes, but with copyrighted material	No, but audio landscape is complete	No, but there is any audio	No audio
Game is Substantial	Game takes 5-10 minutes to play through, with no noticeable filler	Game takes 1-5 minutes to play through, with no noticeable filler	Game takes 5-10 minutes to play through with noticeable filler	Game takes 1-5 minutes to play through with noticeable filler	Game takes less than 1 minute to play through	No game to play
Game is Fun to Play	Yes		No			Game is not a game
High Concept and Game Script Complete	Has all required information in correct locations	Has most of the required information	Missing some important information, but both exist	Missing most of one document	Missing most of both documents	None
Description of what the game is teaching	Detailed and accurate	Detailed, mostly accurate, but at least 1 error	Accurate, but only with interpretation	Inaccurate, but I can argue I see where you are coming from	Inaccurate	Non-existent
Defined Rules	Rules are defined, mostly complete, and are detailed and understandable	Rules are defined but are missing minor, obvious rules	Rules are defined but are missing major rules	Rules are defined, but barely	Rules defined are not present in game	None defined
Game Modes Defined	Every Game Mode experienced is defined in the document	Most Game Modes are defined, but one is missing	Some Game Modes are defined	Game Modes are incorrectly defined, but concept is correct	Game Modes are completely incorrect	None defined
Game Concept, Player and Background Described	Concept and Player defined, Background fits	Concept and Player are described; limited background information	Concept or Player is described, but not correct	Background information, but no Concept/ Player or Concept/ Player but no Background	Neither described nor implemented	None
Description of what changed between iterations	Description of changes and git pushes match	Git history shows iterations but only some are described in documents	Git history shows iterations but none described	No Git history, but changes are described	No Git history, changes are not described, but there is a section for this	None
